

Application:

The **mobifor** is formed by twenty four 25 kg weights made of concrete containing steel particles which are positioned on four steel arms connected at the centre by a joining plate equipped with a rotary anchor point with energy dissipater. The **mobifor** is a fast, reliable solution for setting up a temporary or permanent anchor on terrace roofs. No drilling is required to install the **mobifor** on a terrace roof, thus eliminating the roof tightness problems which drilling can carry. Anchoring strength is ensured by the adherence and weight of the anchor point on the structure

Feature:

- Four galvanized steel arms, each intended to receive and lock twenty four 25kg weights ;
- **mobifor** is equipped with a stainless steel INRS energy dissipater serving as a 360° rotary anchor point. The dissipater is used to connect the fall arrest system and absorb the forces in the event of a fall.
- The concrete weights containing steel particles are highly compact, thus significantly decreasing the space required on the installation surface. The weights are designed with large handles for easy handling purposes.
- Weight :624kg

Description

The **mobifor** is designed for all terrace roofs with slope less than 5°

Its patented design ensures quick installation in less than 3 minutes.

By eliminating the need to drill the structure or to use any tools, this anchor point represents an easy-to-use safety element which can be implemented in places where traditional anchoring systems are impossible to install.

By the miniaturised, ergonomic design of the weights, the user can access the terrace roofs without the need for specific lifting equipment to install the anchor point.

Norm:

Complies with EN795 E/2012
