We are a well-established progressive company in Biggleswade, Bedfordshire in the United Kingdom offering a wide range of products and services in the specialised field of materials handling and lifting equipment suppliers. The foundation of our business is our ability to respond quickly and efficiently to your requirements, small or large, from a single eyebolt to an overhead crane.

Our product range also consists of more specialised lifting equipment such as reel handling equipment, vacuum lifting equipment, magnetic lifting equipment and if a standard product is not suitable we offer a lifting equipment design facility. We can design, build, erect, commission and test, overhead travelling cranes, jib cranes, gantries and runway beams to suit our customer's specific requirements.

We offer a repair, testing and certifying service for lifting equipment complying with the requirements of UK Statutory Regulations for all types of lifting equipment and this can be carried out either within our own workshop or on site. We also offer to inspect your lifting equipment and maintain statutory records as required.

We also offer a short or long term lifting equipment hire service on a wide range of lifting equipment.

We are members of the 'Lifting Equipment Engineers Association' and in order to obtain and retain membership, we have to carry out all work associated with lifting equipment in accordance with the Association's Code of Practice.
