Introduction

Your Problem is our Business!

Anglia Handling was established in 1987 and is based in East Anglia, UK. We are a progressive company offering a wide range of products in the specialised fields of:

- Lifting
- Materials Handling
- Construction
- Personal Protection
- Access
- Weighing

We are able to respond quickly and efficiently to your requirements whether it is a single eyebolt or an overhead crane. We are members of LEEA (Lifting Equipment Engineers Association), which requires us to comply with their Code of Practice standards.

Our product range includes specialised equipment such as vacuum lifting devices and reel lifting and turning solutions. Where a standard product is not suitable our design department can modify an existing product or manufacture a bespoke item. We can also build, install, commission and test overhead cranes, jib cranes, gantries and runway beams to suit your requirements.

We also offer the following services:

- Design
- Inspection
- Repair
- Installation
- Testing
- Certification
- Servicing
- Hire

These services can be carried out on site at your premises or within our own workshop in Bedfordshire.

Please visit our website at www.angliahandling.co.uk where you will find a comprehensive range of products and information with a shop where you can buy online.

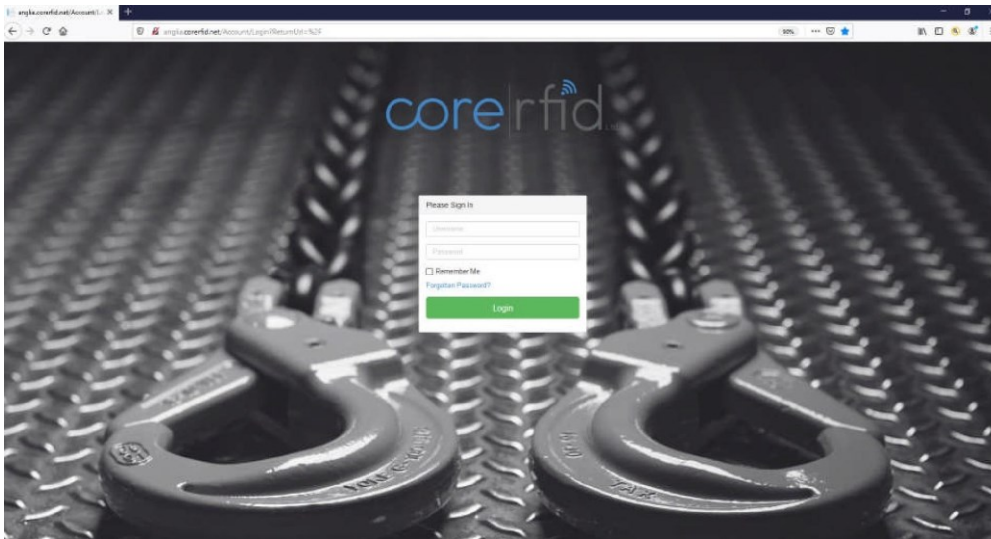

Repair, Test and Certification

We operate a comprehensive maintenance service for all lifting tackle including overhead cranes, electric chain and wire rope hoists, hand chain blocks, lever hoists, chain slings, wire rope slings, winches, Tirfor winches, lifting beams, vacuum lifting equipment, scissor lift tables, hydraulic jacks, trucks and associated equipment etc.

Our service includes:

1. Inspections and the issue of detailed reports with Cloud Based Access. For more information, please refer to our website.

2. Repairs of ALL makes and types of Lifting and Materials Handling Equipment.
3. Records kept of all Equipment received for Repair and Test.
4. Advice given when inspections are due.
5. Works facilities always available for urgent repairs and modifications.
6. Advice from 'Lifting Equipment Engineers Association' qualified engineers who specialise in Lifting, Materials Handling and Height Safety problems.
7. Compilation and maintenance of Lifting Equipment Registers.

Is your Lifting Equipment properly maintained?

Regular maintenance by us will:

- Reduce the chance of an accident.
- Reduce the costs of repairs.
- Increase your productivity.
- Automatically meet LOLER and PUWER Regulations.

**FOR YOUR SAFETY AND THAT OF OTHERS
LET US MAINTAIN YOUR LIFTING EQUIPMENT**

Examination and Testing

SUMMARY OF REQUIREMENTS FOR TAKING INTO USE

There is no distinction between Lifting Accessories and Lifting Equipment. The manufacturer, or importer into the EEA, will issue the EC Declaration and affix the CE/UKCA Mark. If the user holds the Declaration, the Declaration is less than 12 months old and the equipment is new and unused he may take the item into use for the first time. In all other cases he must have it thoroughly examined and the examination report must comply with the requirements given in Schedule 1 of LOLER.

SUMMARY OF REQUIREMENTS FOR PERIODIC EXAMINATION

Once in use the equipment must be either examined periodically or in accordance with a written scheme of examination drawn up by a competent person. For lifting accessories, the period is no greater than 6 months and for lifting equipment it is no greater than 12 months. For lifting equipment intended for lifting persons the period is no greater than 6 months.

Periodic examinations of in-service equipment are the responsibility of the duty holder (usually the employer of the person using the equipment). The owner of the equipment is responsible for retaining the examination reports in hard copy or electronic format in line with the appropriate legislative requirements for that country or region.

Please contact us to inspect your equipment, with reports stored for Cloud Based Access.

SUMMARY OF REQUIREMENTS FOR LOAD TESTING

There are no legal requirements for periodic load testing. Testing is a matter for the manufacturer when producing a new item or at the discretion of the competent person once the item is in service. In this respect British Standards have no legal status, a Harmonised European Standard on the other hand has a quasi-legal status and a manufacturer can use this as his way of demonstrating compliance with the Machinery Directive. A user has a legal obligation to ensure equipment he introduces into the work place complies with the Directive.

Manufacturers, including users who produce an item for their own use, must comply fully with the Supply of Machinery (Safety) Regulations (please refer to paragraph 1 above). Users must comply fully with both PUWER and LOLER. PUWER applies to ALL equipment and LOLER then gives the specific additional requirements necessary for lifting equipment. Please refer to the full legislation to ensure all obligations are met.

We offer in-house and on-site testing as well as CAD design and simulation services – certified Solid Works Professional in Mechanical Design.

Please contact us to test your equipment, with reports stored for Cloud Based Access.

Hire

We offer the following Lifting Equipment for Hire.

- Mobile Gantries
- Beam Clamps
- Hydraulic jacks
- Electric Chain & Wire Rope Hoists
- Skates
- Tirfor Winches
- Hand Chain Blocks
- Beam Trolleys
- Lever Hoists
- Genie Material Lifts
- Fork Truck Jib Attachments
- Ancillary Equipment

Beam Clamp

Mobile Gantry

Bottle Jack

Lever Hoist

Tirfor Winch

Toe Jack

Hand Chain Block

Beam Trolley

Metal Roller Skates

Fork Truck Jib Attachment

Wire Rope and Slings

We have an extensive rigging facility enabling us to provide the following services:

- Manufacture of wire rope slings and nets.
- Long splicing – on site or in our works.
- Hand splicing, socketing and fitting.
- Supply and fitting of new ropes on cranes, hoists and contractors equipment.

Due to the extremely wide range of types and constructions of wire rope it is impracticable in a catalogue of this size to illustrate all that is available and for this reason we recommend that you consult our technical sales personnel when wire ropes are required.

To enable us to advise you, the following information should be provided:

1. The purpose for which the rope will be used.
2. Length.
3. Diameter.
4. Construction – if known.
5. Bright or Galvanised.
6. Breaking load or safe working load required.
7. Type of fitting required.
8. If fitted at each end the points between which measurements are to be taken.

SUBSTANTIAL QUANTITIES OF POPULAR SIZES AND CONSTRUCTION ARE ALWAYS IN STOCK AND ROPES TO SUIT INDIVIDUAL REQUIREMENTS CAN BE QUICKLY OBTAINED.

Examples of typical types and constructions available.

6 x 19 (12/6/1)

Standard flexible hoisting rope combining moderate flexibility with high strength. Suitable for most hoists and cranes or wherever rope is continually passing over drums and sheaves. Available with fibre core or I.W.R.C.

6 x 36
(14/7 and 7/7/1)

Highly flexible hoisting rope with high strength. Used extensively for hoists, overhead cranes, winches and excavating equipment. Available with fibre core or I.W.R.C.

6 x 19 (9/9/1)

A stiffer construction than 6 x 19 (12/6/1) suitable for hoists and cranes with comparatively large drum or sheave diameters. Used extensively for making slings of all types.

17/7 non rotating

This construction is used mainly on high lift cranes, where rope twist or spin under load would be a problem. Unlike many other ropes the ends do not need to be fixed to prevent rotation. Available with fibre core or I.W.R.C.

It should be noted that fibre core ropes retain lubricant much longer in adverse conditions than ropes with independent wire rope core (I.W.R.C.).

Wire Rope Sling Types

AHS 1
SOFT EYE EACH END

AHS 2
THIMBLE EYE EACH END

AHS 3
THIMBLE EYE ONE END, SOFT EYE OTHER END

AHS 4
THIMBLE EYE ONE END, SOFT EYE
OTHER END FITTED WITH CHOKER HOOK

AHS 5
SOFT EYE ONE END AND SLING HOOK OTHER END

AHS 6
THIMBLE EYE ONE END AND SLING HOOK OTHER END

AHS 7
RING ONE END THIMBLE AND SAFETY HOOK OTHER END

AHS 8
THIMBLE EYE ONE END, SOFT EYE
AND RIGGING SCREW OTHER END

AHS 9
THIMBLE EYE ONE END, THIMBLE
EYE AND SHACKLE OTHER END

AHS 10
CLOSED SOCKET ONE END,
OPEN SOCKET OTHER END

AHS 11
TWO LEG SLING WITH MASTER LINK AND SLING HOOKS

AHS 12
THREE LEG SLING WITH MASTER LINK AND SLING HOOKS

AHS 13
FOUR LEG SLING WITH MASTER LINK AND SLING HOOKS

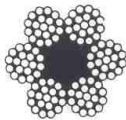

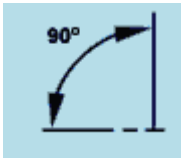

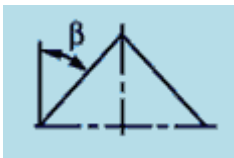

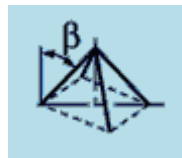

AHS 14
ENDLESS SLING

Safe Working Loads

Based on 1960 tensile grade; 6x36WS-IWRC (steel core) construction and having ferrule secured eye terminations.

LOAD CHART

							
Wire Rope Diameter (mm)	Minimum Breaking Load (tonnes)	WLL Single Leg	WLL 2-Leg Sling		WLL 3 or 4-Leg		WLL Choke Hitch
		0° (tonnes)	0-45° (tonnes)	45-60° (tonnes)	0-45° (tonnes)	45-60° (tonnes)	0° (tonnes)

36	92.20	16.60	23.23	16.60	34.85	24.89	26.55
38	103.00	18.54	25.96	18.54	38.93	27.81	29.66
40	114.00	20.52	28.73	20.52	43.09	30.78	32.83
44	138.00	24.84	34.78	24.84	52.16	37.26	39.74
48	164.00	29.52	41.33	29.52	61.99	44.28	47.23
52	192.00	34.56	48.38	34.56	72.58	51.84	55.30
Leg Factor KL		1	1.4	1	2.1	1.5	1.6

KL is the leg factor related to the number of legs and the angle to the vertical.

Larger diameter wire rope assemblies available on request.

The Safe Working Load (SWL) will normally be equal to the Working Load Limit (WLL), although in some instances it may be less e.g. if the sling is used in Choke Hitch the SWL will equal the WLL x 0.8.

Components

Grade 'T' (8) Chain BS EN 818-2

Properties:

Working Load Limit (W.L.L.) is the maximum load which chain or components are designed to sustain in lifting use. The mean stress at this load is 200n/mm² (MPa) and is based on a factor of safety of 4:1.

Manufacturing Proof Force (M.P.F.) is the force to which during manufacture chain or components are subjected. The mean stress at this load is 500n/mm² (MPa), which is 2.5 times the working load limit.

Minimum Breaking Load (M.B.L.) is the minimum force which chain or components must withstand before failure. The mean stress at this load is 800n/mm² (MPa). The minimum elongation before failure is 20%.

1.3

1.6

Components

Grade 'T' (10) Chain BS EN 818-2

Properties:

Working Load Limit (W.L.L.) is the maximum load which chain or components are designed to sustain in lifting use. The mean stress at this load is 200n/mm² (MPa) and is based on a factor of safety of 4:1.

Manufacturing Proof Force (M.P.F.) is the force to which during manufacture chain or components are subjected. The mean stress at this load is 500n/mm² (MPa), which is 2.5 times the working load limit.

Minimum Breaking Load (M.B.L.) is the minimum force which chain or components must withstand before failure. The mean stress at this load is 800n/mm² (MPa). The minimum elongation before failure is 20%.

* Grade 5

Galvanised steel pump chain also available, please contact us for details.

Flat Webbing Slings

Polyester webbing slings have many advantages over conventional chain or steel wire rope slings, particularly where the item to be lifted is in danger of being marked or damaged in the lifting process. The synthetic sling then comes into its own. The slings flexibility and ease of handling are appreciated by those involved in the lifting process and the wide load bearing surface aids safer lifting. Our slings are made from high strength polyester yarn incorporating good shock absorption properties with a high strength to weight ratio. Wear sleeves are available as an optional extra.

Polyester slings are suitable for use in a temperature range from - 40° C to + 100° C and are resistant to moderate strength acids. Do not use in alkali conditions. Seek our advice if exposure to chemicals is likely.

All our slings comply with BSEN 1492 part 1, are colour coded for increased safety with a Safety Factor of 7 : 1.

Sling Types:

1. **Soft Reinforced Eyes Each End**
2. **Metal Eyes Each End**

Joker Hook

Simply thread the roundsling or the eye of a webbing sling to the Joker hook, without using any tools, and now attach the sling to the lifting point of the load. The Joker hook enables single and multi leg slings to be made up using roundslings and flat webbing slings thus reducing sling dead weight and damage to the product to be lifted. The joker hook can also be used to connect two lifting slings together.

Endless Flat Webbing Slings

Cargo Restraints

Webbing cargo restraints and chain load binders/tensioners are used extensively throughout industry for safely transporting goods in vans, lorries and low loaders.

Webbing

We offer a range of webbing ratchet cargo restraint assemblies in either a two-part or endless design complying with EN 12195-2:2001. The two-part assembly comprises a short fixed length (usually 300 mm) fitted to the ratchet at one end and with a fitting at the other and a long length (length to order) with a fitting at one end and free the other where it engages with the ratchet.

Lever Hoists – ATEX Spark Resistant also available

The versatile Lever Hoist is designed to perform a wide variety of lifting, pulling, tensioning and securing applications. The new generation of products incorporate the latest advances in design to provide maximum safety and strength combined with minimum operating effort. For rapid hook positioning, the load chain can be either 'pulled through' or 'wound through' by means of the hand wheel.

The lever hoists are tested and certified at 2% of the rated capacity to ensure their light load capability.

The unit fully complies with the requirements of the EU Machinery Directive and is CE certified.

Operating temperature range of between -20°C to +120°C.

We can supply the length of chain to suit your application.

Overload limiter available as an option (800 – 1500 kg units).

Tirfor Pulling / Lifting Machines, Pulley Blocks

Tirfor T-500 and TU machines are of a very compact design and easy to handle. The T-500 series is particularly recommended where lightweight equipment is essential whereas the heavy-duty TU series is ideal for arduous environments. Both are suitable for lifting, pulling or work positioning.

Tirfor T-500 (standard duty)

	Model	Unit	T-508	T-516	T-532
	Capacity for lifting	kg	800	1600	3200
	Weight	kg	6.6	13.5	24
	Diameter of rope	mm	8.3	11.5	16.3
	Standard rope length	m	20	20	20

(longer rope lengths are available on request)

Tirfor TU (heavy duty)

	Model	Unit	TU-8	TU-16	TU-32
	Capacity for lifting	kg	800	1600	3200
	Weight	kg	8.4	20	27
	Diameter of rope	mm	8.3	11.5	16.3
	Standard rope length	m	20	20	20

(longer rope lengths are available on request)

The Tirfor TU-16 and TU-32 machines are also available with hydraulic power operation. The Tirfor machines are connected to a hydraulic power pack which allows remote operation, either singly or combined, 1, 2 or 4 Tirfor machines. The power pack may be supplied with a petrol engine or an electric motor. The TU-32 is also available with air operation.

A smaller Jockey machine is also available in capacities of 300 and 500 kg.

Wire Rope Pulling Machine

	Model	Unit	WP800	WP1600	WP3200
	Capacity for pulling	kg	800	1600	3200
	Weight (w/o rope)	kg	12	25	46
	Diameter of rope	mm	8.3	11	16
	Standard rope length	m	20	20	20

Pulley Blocks

We offer a range of single and multi-sheave pulley blocks fitted with a hook or shackle, with capacities ranging from 2 to 20 tonnes. We have shown a small selection below.

	Sheave Ø (mm)	Sheave Ø (inches)	Head Load (tonnes)	Wire Rope Ø (mm)	Bushing	Weight (kg)
	76	3	2	8 – 10	Bronze	3.8

Electric Chain Hoists *(capacities from 125 – 6,300 kg)*

- ✓ Mains contactor as standard, for increased safety
 - ✓ Low voltage 48v contactor control
 - ✓ Insulated pendant control to IP65
 - ✓ Hook path to suit your application
 - ✓ Larger chain collectors available
 - ✓ 3 phase and single phase supply
 - ✓ Slower 10 m/min travel speed also available
- Optional upper and lower limit switches
 - Optional radio remote control
 - Optional stainless steel load chain
 - Optional special paint for hostile environments
- Spark Resistant  also available

Our standard range of electric chain hoists are available with capacities ranging from 125 to 6300 kg, which can be **supplied with a hook suspension, hand pushed, hand geared or a power travel trolley.**

Please note that the 'Headroom' dimension is for a hoist with hook suspension.

Electric Wire Rope Hoists *(capacities from 1,000 – 160,000 kg)*

- ✓ Mains contactor as standard, for increased safety
- ✓ Low voltage 48v contactor control
- ✓ Insulated pendant control to IP65
- ✓ Longer hook path on request
- ✓ Different travel speeds available on request
- ✓ Upper and lower limit switches
- ✓ Heavy duty rope guide
- Optional radio remote control
- Optional special paint for hostile environments
- Spark Resistant  also available

The SH hoist unit can be used as a low headroom monorail hoists with a counterweight for operation on a single girder crane or as a solo travelling hoist for operation on a monorail.

Universal design travel wheels are suitable for sloping and parallel beam flanges.

The electrical equipment for the hoist and cross travel control are integrated in the hoist.

Control is via a suspended control pendant with an emergency stop.

Control is also optionally possible by means of radio remote control. The receiver is integrated into the hoist/crab electrical equipment.

Hoists are also available as a stationary design, double girder trolleys for crane applications and articulating trolleys for curved runways.

* Alternative lift heights available on request

** Can be dependant on hoist body size and beam flange width

*** Alternative lifting speeds available on request

Demag Manulift Chain Hoist

Available in capacities of 125, 250 and 500 kg.

The Demag Manulift electric chain hoist incorporates the Up and Down pendant control buttons into the load hook to offer one handed operation, leaving the other hand free to guide the load.

The load hook is connected to the control block by a 'quick-release' bayonet coupling, so it can easily be removed and replaced by another standard attachment.

Standard attachments are shown below as well as a separate bayonet coupling that can be incorporated into a bespoke attachment and a load hook adaptor so the bayonet coupling system can be used on the hook of a standard hoist.

Model Options (Eye Suspension):

Capacity	Lifting Speeds	Hook Path *	Falls of Chain	Headroom *
125 kg	8 and 2 m/min	2800 / 4300 mm	1	694 / 764 mm
125 kg - variable	0.15 – 30 m/min	2800 / 4300 mm	1	694 / 764 mm
250 kg	8 and 2 m/min	2800 / 4300 mm	1	694 / 764 mm
250 kg - variable	0.15 – 16 m/min	2800 / 4300 mm	1	694 / 764 mm
500 kg	8 and 2 m/min	2800 / 4300 mm	1	746 / 816 mm
500 kg - variable	0.08 – 8 m/min	2800 / 4300 mm	1	746 / 816 mm

Demag Balancer

Available in capacities of 125 and 250 kg.

The Demag Balancer uses a standard variable speed electric chain hoist in conjunction with weight sensing and an intuitive control for precise positioning using light manual input only.

The weight of the load is 'balanced' so it can be controlled very easily with the D-Grip Servo control handle and by switching over to 'Load Positioning Mode' the operator can grasp and guide the load directly with light pressure.

A high level of safety is assured for assembly operators because any oscillation and uncontrolled load movements are suppressed.

Load handling attachments can be lifted in conjunction with the load.

Special Hoists

We offer a range of additional features and hoists to suit special applications.

Low Headroom Hoists

The hoist load hook is situated to one side of the hoist body to offer an increased height of lift.

Multiple Lift Hoists

Hoists can be fitted with two or four load chains lifting and lowering simultaneously to ensure the load is stable and lifted horizontally.

Other Options:

- Thoraxal paint for acid resistance
- Stainless steel load chain
- Foundry duty load chain
- Heat shields

Air Chain Hoists

Air hoists are acknowledged as the only conceivable alternative for an increasing number of applications, especially where continuously variable speed and good inching characteristics are essential.

Air hoists are especially suitable for hazardous areas where they resist high humidity, vapour or smoke as well as extreme temperatures from - 20° C up to + 70° C.

Standard 'Mini' Series

- High working speeds
- Sensitive pendant control
- Increased operating hours
- Food grade version available

Type		Mini 125	Mini 250	Mini 500	Mini 1000

Larger capacities are available on request

* Chain containers increase the headroom.

Jib Cranes

Freestanding, wall or column mounted jib cranes - capacities from 40 kg to 6300 kg and arm radius up to 7 metres (depending on arm design). Can be supplied with manual, electric or air operated hoists.

Wall or Column Mounted Overbraced - 180°

Secured to existing walls or building columns

Wall or Column Mounted Underbraced - 180°

Secured to existing walls or building columns

Post Mounted Overbraced - 300°

Secured to existing concrete floors or to a prepared foundation

Post Mounted Underbraced – 270° / 360°

Secured to existing concrete floors or to a prepared foundation
Powered slewing option available as an option

Mobile Options - 270° / 360°

Mobile using a fork truck, manual truck (as shown) or a crane

Post Mounted Articulated Arm

Secured to existing concrete floors or to a prepared foundation

Overhead Travelling Cranes

Overhead travelling cranes are the answer to many lifting and movement problems in factories, warehouses and stockyards. Cranes may be overslung or underslung with single or double girders to suit the building and application involved. Operation can be manual or power driven in the long travel, cross travel and lifting movements or a combination of the two.

Single Girder overslung (top running) travelling crane.

Maximum Capacity: 10 tonne
Maximum Span: 36 metres

Hoist Options: Chain or Wire Rope
Control Options: Manual Hand Chain
Mobile Pendant
Remote Control

Single Girder underslung (bottom running) travelling crane.

Maximum Capacity: 8 tonne
Maximum Span: 25 metres

Hoist Options: Chain or Wire Rope
Control Options: Manual Hand Chain
Mobile Pendant
Remote Control

Double Girder overslung (top running) travelling crane.

Maximum Capacity: 80 tonne
Maximum Span: 36 metres

Hoist Options: Wire Rope
Control Options: Mobile Pendant
Remote Control

Single Girder wall travelling crane.

Maximum Capacity: 5 tonne
Maximum Span: 10 metres

Hoist Options: Chain or Wire Rope
Control Options: Manual
Mobile Pendant
Remote Control

Modular Cranes

Modular runway beams and cranes are made up from pre-formed lightweight pressed steel tracks. They are normally supplied with a manually operated cross and downshop travel and can be fitted with a manual, electric or air hoist. We also design, manufacture, install, test and certify the runway or crane complete with all supporting steelwork. Examples shown below.

Single Girder Runway Beam

Maximum Capacity: 2000 kg

Double Girder Runway Beam

Maximum Capacity: 2000 kg

Single Girder Crane

Maximum Capacity: 1000 kg

Double Girder Crane

Maximum Capacity: 2000 kg

Double Girder Crane c/w 'Stooled Up' Bridge

Maximum Capacity: 2000 kg

Double Girder Crane c/w Powered Travel

Maximum Capacity: 1600 kg

Mobile Gantries

Mobile Lightweight Gantry

- Capacities up to 500 kg
- Ideal for handling small loads
- Supplied with a top running hand pushed trolley
- Lightweight design
- Supplied with 100 mm diameter nylon castors
- Height under beam 2438 mm
- Width between frames 2438 mm

Mobile Packaway Gantry

- Capacities up to 2000 kg
- Designed for easy dismantling and transportation
- Lightweight design
- Supplied with cast iron castors
- Standard height under beam 3048 mm
- Standard width between 'A' frames 3353 mm

• **Also manufactured to your specification**

Mobile Fixed Height Gantry

- Capacities up to 5000 kg
- Bracing can be internal (as shown) or external
- Supplied with cast iron castors
- Options include polyurethane tyred castors and parking jacks
- Standard height under beam 3048 mm
- Standard width between 'A' frames 3353 mm

• **Also manufactured to your specification**

Mobile Adjustable Height Gantry

- Capacities up to 6000 kg
- Infinitely variable adjustment of up to two thirds of the basic height obtained by screw and bevel gearing, which is self sustaining
- Options include polyurethane tyred castors and parking jacks
- Standard height under beam 2743 - 4115 mm
- Standard width between 'A' frames 3353 mm

• **Also manufactured to your specification**

Aluminium Gantries and Tripods

Ideal for site changes. The gantry is easily erected by one person due to link between beam and supports.

Fold out the four supports, secure with bolts and adjust to the height required. Supplied with an erection aid.

Fixed Adjustable Height Aluminium Gantry - type 530

	Safe Working Load:	750 or 1500 kg
	Overall Height:	1870 - 3080 mm
	Overall Width:	4115 mm
	Trolley Suspension Height:	1510 - 2720 mm
	Weight:	85 kg
Supplied with a top running hand pushed trolley.		

Mobile Adjustable Height Aluminium Gantry - type 535

	Safe Working Load:	1000 kg
	Overall Height:	2400 - 3200 mm
	Overall Width:	4000 mm
	Trolley Suspension Height:	2000 - 2800 mm
	Weight:	130 kg
Supplied with a top running hand pushed trolley.		

Fixed Adjustable Height Aluminium Tripod

	<ul style="list-style-type: none"> ✓ Light Aluminium construction ✓ Telescopic legs for compact transportation ✓ Spiked feet as standard ✓ Swivel suspension eye
	<ul style="list-style-type: none"> ▪ Optional rubber feet for solid ground ▪ Optional safety chain for smooth ground

Model	Capacity (kg)	Length of Support L Min/Max. (mm)	Clearance Height H Min/Max. (mm)	Spreading Angle B Min/Max. (mm)	Weight (kg)

D-1004	1000	2250 / 4000	1860 / 3440	1790 / 3070	36

- Maximum spreading angle (25°).
- Permitted for man riding applications up to 150 kg according to EN 795. Equipped with rubber plates and safety chain.

Counterbalanced Floor Cranes

A range of Counterbalanced Floor Cranes, each fitted with a telescopic arm with the option of a fixed extension piece to increase the reach by a further 450 mm.

All models are battery powered with the 250, 500 and 750 kg models fitted with powered travel.

All models feature powered lift, powered arm extension and manual rotation.

Model	Power	Capacity 1	Capacity 2	Capacity 3	Lift Height	Reach
CBC 150	Semi Electric	150 kg	96 kg	75 kg	up to 2716 mm	up to 1503 mm

Automatic Safety Hook – available in 2, 5, 10, 15 and 20 tonne

Automatically hooks up, safety locks and releases so the risk of injury is dramatically reduced.

Powered Vacuum Lifting Beams

Powered vacuum lifting beams are a cost-effective way to lift, turn and rotate (if required) a variety of products including **Steel, Wood, Plastic, Glass and Stone**. Our vacuum lifting beams can be supplied with single or multiple adjustable suction pads to suit the product, some of which can be switched off by lever valve if required – mains or battery powered.

We can also offer a range of adjustable work stands using vacuum power to secure the load.

All devices are fitted with rubber sealing rings with the quality of rubber designed for normal lifting conditions.

- ❖ Standard oil resistant - **BLACK**
- ❖ Heat resistant - **RED**

Options Available:

- 90° and 180° rotation
- resting trestles
- weld-on hooks
- manual and powered rotation
- foldable beams
- chain suspension
- coil handling design
- safety webbings
- cable remote control

Self-Suction Vacuum Lifting Beams

Our self-suction vacuum lifting beams can be suspended from a hoist hook with **NO ELECTRICS** required to operate them.

Each vacuum-lifting beam is supplied with an audio/visual warning system to warn the operator of excess weight and loss of vacuum. The suction feet will not damage the item to be lifted. Operation is simply place down and lift up, with the vacuum automatically switches from suction to no suction each time the beam is supported.

The vacuum-lifting beam can be supplied with a single or adjustable multiple suction feet with capacities ranging from 75 to 4000 kg.

When lifting large area measurements, it is imperative that there is no flexing/bending of the sheet.

All devices are fitted with rubber sealing rings with the quality of rubber designed for normal lifting conditions.

VacuEasylift Vacuum Lifting Hoists

The VacuEasylift is a manually operated powered vacuum lifting device that handles almost any type of load. The extremely smooth and quick operation is accomplished by using the same handle to lift, lower and release the load and by using the same vacuum to hold and lift the load. By supplying the VacuEasylift with a vast variety of suction feet it can be used to lift anything from a cardboard box to a television.

Typical Applications

- Boxes
- Reels
- Wood
- Steel
- Windows
- Sacks
- Cheese
- Paper
- Pallets
- Televisions
- Plastic
- Stone

Optional Extras include a bottom swivel, quick release couplings, a 90 degree angle adaptor, white non marking suction pads, stainless steel fittings etc.

Permanent Lifting Magnets

Permanent lifting magnets manufactured from two-pole design, high energy magnets with an improved easy switching system with only one hand. Suitable for flat and round sections.

Safety Factor: 3 : 1

Applications:

- Workshops
- Construction sites
- Warehouses
- Steel stockholder

Hand Magnets

Factors that reduce the magnetic clamping force:-

Air gap: An air gap between the magnet and the load such as surface damage, paint, dust and mill scale.

Material thickness: Plates thinner than the recommended minimum will reduce the lifting capacity.

Temperature: The temperature of the load must not exceed 200°C.

Contact area: Full lifting capacity is only achieved when the magnet has full contact area with the component.

Material Type: Certain materials have different abilities to carry magnetism so a reduction factor must be applied. Please contact us for more details.

Model	Flat Material		Round Material		Maximum Length Of Material (mm)	Dimensions			
	Working Load Limit (WLL) (kg) **	Minimum thickness for WLL (mm)	Working Load Limit (WLL) (kg) **	Diameter Min./Max. (mm)		Length (mm)	Width (mm)	Height inc. Eye (mm)	Weight (kg)
PLM 100	100	14	50	40 - 300	2000	122	69	185	5.3
PLM 300	300	20	150	60 - 300	2500	192	95	225	13.5
PLM 500	500	24	250	60 - 400	3000	232	120	270	27.5
PLM 800	800	34	400	60 - 400	3500	302	154	320	52
PLM 1000	1000	40	500	80 - 400	3500	332	154	320	57
PLM 2000	2000	55	1000	100 - 400	3500	392	196	420	125
PLM 3000	3000	65	1500	200 - 500	3500	497	220	453	195

** Maximum lifting capacity is achieved by using mild steels with the noted minimum thickness.
Mild steel st37 – Fe 360 to BS EN 10 025 1990 (DIN 17100)

Tilting Lifting Attachment

Battery Lifting Magnets

- Powered by a built-in 12-volt battery for at least 8 hours operation.
- Hand held IR remote control available.
- Bail sensor prevents magnet de-energisation while lifting a load.
- Dual buttons for RELEASE.
- Visual and audible alarms indicate low battery level.
- Magnet cannot be turned on if battery charge is too low.
- Built-in, temperature compensated, automatic cut-off charger.

BM Series for Flat Material Handling

BM1350, BM2500, BM5000

These models are designed to lift heavy, thick plates and blocks. The maximum lift capacity is obtained on a material thickness of 50 mm and above and on a relatively flat, machined surface. Model BM5000 has two independently suspended '2500' magnets to lift large objects.

BM3600

This model is specially designed for plate lifting from 3 mm thickness and up. Provided a smooth and flat surface, this magnet will lift a plate of 2400 x 1800 mm of 3 mm thick and even 6 x 3 metres when 25 mm thick! The 'tip off' feature allows to drop excess plates in case multiple plates are picked up from a stack.

BMP series for Flat, Rounds and Structural Sections

BMP1800, BMP3600

These so-called bi-polar lifting magnets with V shaped pole shoes are designed to lift both flat and round material as well as 'I' and 'H' beams, angles, channels, tees and zeos. The maximum lift capacity is obtained on a material thickness of 50 mm and above. Thanks to the good depth of field, these models cope very well with irregular surfaces.

Pallet Forks and Brick Grabs

Pallet or Crane Forks type TKG

Designed to convert a crane into a forklift truck for handling palletised loads. Two types are available, manual or automatic balance with or without adjustable tines.

	Model	WLL (kg)	Pallet m ³	Weight (kg)
	TKG1.0vh (manual balance)	0 - 1000	1	130
	TKG1.0vhs (automatic balance)	200 - 1000	1	140
	TKG2.0vh (manual balance)	0 - 2000	1	200
	TKG2.0vhs (automatic balance)	400 - 2000	1	220

Block Grabs type TBG

A scissor type grab designed to transport all materials with parallel surfaces that can withstand the clamping pressure twice as high as the load being lifted.

	Model	WLL (kg)	Block Size (mm)	Weight (kg)
	TBG 500S	500	0 - 150	27
	TBG 1000S	1000	50 - 250	50
	TBG 200L	200	200 - 500	49
	TBG 300L	300	400 - 700	52
	TBG 500L	500	600 - 900	55
	TBG 1000L	1000	800 - 1100	72

Brick Grabs type ISG-5

	WLL (kg)	Grab Opening (mm)	Clear Height (mm)	Weight (kg)
	1800	600 - 1130	400 - 925	260
	Designed to lift palletised brick loads (the bricks must be securely bound). Jaws are fitted with soft liners to minimise damage to the load. The grab is fitted with an automatic 'open/closed' device that enables a single operator to stack or unstack palletised bound loads.			

Container Lifting Lugs

	Model	WLL (tonnes)	Chain Angle	Type	Weight (kg)

	CLB	40 (set of 4)	Degree 36	Side Lifting	18
	CLB	50 (set of 4)	Vertical	Side Lifting	18

Lifting and Girder Clamps

Universal Plate Clamps type 92 and CZ

These clamps lift and turn over plates in one smooth operation. Available with a standard hook ring (as shown) or with a short chain sling for easy fitting directly on to a crane hook. Hardened steel jaws are suitable for all structural steel below HRC 30/Brinell 300 surface hardness.

	Model	WLL (kg)	Plate Thickness (mm)	Weight (kg)

Larger sizes available on request.

Hinged Universal Plate Clamps type CY and CX

The CY clamp is based on the CZ clamp incorporating a hinged hook ring. They have been developed especially for the handling of plate at any angle. The CX clamp is particularly suitable for handling fabrications because of the facility of the lifting eye and link.

Hardened steel jaws are suitable for all structural steel up to 300 Brinell surface hardness.

	Model	WLL (kg)	Plate Thickness (mm)	Weight (kg)
	CY1	200 - 1000	0 - 20	4.6
	CY2	400 - 2000	0 - 32	14
	CY3	600 - 3000	0 - 32	14
	CX1500	225 - 1500	0 - 20	7
	CX3000	450 - 3000	0 - 32	12
	CX3000L	450 - 3000	30 - 60	15
	CX6000	1200 - 6000	0 - 50	38
	CX6000L	1200 - 6000	50 - 100	48
	CX8000	1600 - 8000	0 - 50	39
	CX8000L	1600 - 8000	50 - 100	51
	CX10000	2000 - 10000	0 - 50	61
	CX10000L	2000 - 10000	50 - 100	76

Lifting and Girder Clamps

High Grip Universal Plate Clamp type HG

Designed with a higher grip on the lifted plate, particularly suitable for hardened and stainless steel.

	Model	WLL (kg)	Plate (mm)	Weight (kg)
	HG 500	25 - 500	0 - 10	5.0

Gentle Grip Universal Plate Clamp type LJ

Designed to lift plate without marking or damaging the surface finish.

	Model	WLL (kg)	Plate (mm)	Weight (kg)
	LJ 500	25 - 500	0 - 10	3.5
	LJ 1500	180 - 1500	0 - 20	12

Heavy Duty Girder Clamp type CG

Designed to lift large structural beams and fitted with a positive lock on to one of the uppermost edges which will allow the beam to be set down with the web or flange vertical.

	Model	WLL (kg)	Flange (mm)	Weight (kg)
	CG 1	100 - 1000	0 - 16	6
	CG 2	200 - 2000	0 - 32	14
	CG 4	400 - 4000	0 - 32	19
	CG 6	600 - 6000	12 - 50	37
	CG 8	800 - 8000	12 - 50	40

Girder Clamp type TTR

This clamp has been developed to handle structural beams with the flanges in the vertical position.

	Model	WLL (kg)	Flange (mm)	Weight (kg)
	TTR 750	40 - 750	5 - 16	3.5
	TTR 1500	150 - 1500	5 - 25	10
	TTR 3000	300 - 3000	5 - 28	12

Horizontal Girder Clamp type TTG

Designed to lift and transport steel beams with the flanges in a horizontal position. The clamp is fitted with a locking lever and can be used in pairs or singly.

	Model	WLL (kg)	Plate (mm)	Weight (kg)
	TTG 500	25 - 500	0 - 20	3
	TTG 1500	75 - 1500	0 - 30	5.5
	TTG 3000	150 - 3000	0 - 35	11
	TTG 4500	450 - 4500	0 - 40	14.5
	TTG 7500	750 - 7500	0 - 45	28

Lifting and Girder Clamps

Heavy Duty Horizontal Plate Clamps type CH and HH (pairs)

Used in pairs with a 2-leg sling these clamps are designed to move plate in the horizontal plane. Supplied with smooth jaws. Maximum sling angle 90 degrees.

	Model	WLL / pair (kg)	Plate (mm)	Weight / pair (kg)
	CH1	1000	5 - 32	8
	CH2	2000	5 - 32	11
	CH2/L	2000	20 - 50	12
	CH4	4000	5 - 50	17
	CH4/L	4000	50 - 100	23
	CH6	6000	5 - 75	46
	CH6/L	6000	50 - 125	56
	CH8	8000	5 - 75	53
	CH8/L	8000	50 - 125	60
	HH8 - high strength	8000	5 - 50	21
	HH8/L - high strength	8000	50 - 100	28

Roller Toe Horizontal Clamps type RH (pairs)

The contact area features a roller toe to assist correct location and allows reduced marking during lifting.

	Model	WLL / pair (kg)	Plate (mm)	Weight / pair (kg)
	RH 1500	1500	5 - 60	12
	RH 2500	2500	10 - 70	21
	RH 3500	3500	10 - 80	28
	RH 5000	5000	10 - 102	72

Horizontal Thin Sheet Clamps type THK (pairs)

A horizontal plate clamp designed with reversed jaws to handle thin sheets that deflect when being lifted.

	Model	WLL (kg)	Plate (mm)	Weight (kg)
	THK 750	40 - 750	0 - 25	3
	THK 1500	75 - 1500	0 - 35	6
	THK 3000	150 - 3000	0 - 35	11
	THK 4500	225 - 4500	0 - 45	16
	THK 6000	300 - 6000	0 - 60	23
	THK 9000	450 - 9000	0 - 60	35

Screw Cam Pulling Clamps type TSD

Designed for pulling and also available with an additional lug enabling it to pull in two different directions.

	Model	WLL (kg)	Plate Size (mm)	Weight (kg)
	TSD 1500	1500	0 - 35	5
	TSD 3000	3000	0 - 35	8
	TSD 5000	5000	0 - 40	16
	TSD 7500	7500	0 - 40	19.5

Lifting and Girder Clamps

Rail Lifting Clamps type CR

For handling rail sections.

	Model	WLL (kg)	Weight (kg)
	CR 1000	1000	13
	CR 2000	2000	13

Pile Pitching Clamp type CP (fitted with 15 metres of rope)

These clamps are designed specifically for pitching sheet steel piling and have the advantage that a rope is fitted for easy release from ground level.

	Model	WLL (kg)	Throat Depth (mm)	Jaw Width (mm)	Pin Ø (mm)	Weight (kg)
	CP 2	2000	228	20	20	19
	CP 3	3000	228	26	30	23
	CP 5	5000	228	35	30	33

Pile Pulling Clamp type PP

The pile pulling clamp is designed to pull out driven piles. It is extremely difficult to determine the forces required to pull out a driven pile, contractors should take extra care not to exceed the WLL of the clamp.

	Model	WLL (kg)	Jaw Capacity (mm)	Throat Depth (mm)	Weight (kg)
	PP 3	3000	0 - 16	147	12
	PP 8	8000	0 - 30	194	28

Screwlok Clamp type SC92 with shackle as shown, also available without shackle

Screwlok clamps are designed to fit the flanges of RSJ's and UB's as a semi-permanent lifting point.

	Model	WLL (kg)	Beam Width (mm)	Weight (kg)
	SC92-1	1000	75 - 210	5.0
	SC92-2	2000	75 - 210	6.0
	SC92-3	3000	100 - 270	8.0
	SC92-3L	3000	75 - 305	9.0
	SC92-5	5000	100 - 270	10.0
	SC92-5L	5000	75 - 305	12.0
	SC92-10	10000	75 - 305	19.0

Round Stock Grab type RSG

Scissor type grab ideal for handling round materials such as bar or tube.

	Model	WLL (kg)	Pipe Ø (mm)	Weight (kg)
	RSG 100	100	50 - 150	3.9
	RSG 500	500	35 - 200	13.6
	RSG 1000	1000	35 - 200	13.6
	RSG 1500	1500	80 - 300	27.0
	RSG 3000	3000	80 - 300	49.0
	RSG 4000	4000	200 - 600	208.0

Lifting and Girder Clamps

Border Stone Lifter – type LSH

Easy clamping and release by turning the handle

	Capacity (kg)	Contact Surface	Stone Thickness (mm)	Coating	Weight (kg)
	80	Rubber Lined	80	Galvanised	2.5
	80	Rubber Lined	60 - 120	Galvanised	3.0

Stone Clamp – type SZ

Ideal for concrete stones and plates. Large clamping range.

	Capacity (kg)	Clamping Range (mm)	Weight (kg)
	250	0 - 500	11
	250	300 - 1000	14

Stone Lifter – type SH

For kerb stones (including curved), stones and boulders. With rubber coating or tips (3 pieces are needed).

	Capacity (kg)	Clamping Range (mm)	Weight (kg)
	200	0 - 400	9

Flat Clamps – type FZ

Lightweight clamp with a narrow jaw suitable for nearly all materials.

	Capacity (kg)	Clamping Range (mm)	Jaw Surface	Weight (kg)
	800	0 - 60	Rubber Coated	6

Block Clamps – type STZ

Lightweight clamp ideal for concrete and natural stones. Clamp adjusts automatically to material thickness.

	Capacity (kg)	Jaw Surface	Clamping Range (mm)	Web Length (mm)	Weight (kg)
	500	Serrated	40 - 120	250	8
	500	Rubber Lined	30 - 110	250	8
	1000	Serrated	100 - 225	250	14
	1000	Rubber Lined	90 - 215	250	14

Drum Lifting and Turning

Drum Clamp type DC

	Model	WLL (tonnes)	Weight (kg)
	DC500	500	1.2

Designed to lift steel drums (with or without a lid) either singly or as a pair suspended from a 2-leg sling. The clamp is opened by pressing down on the hook ring.

Drum Clamp type DCV

	Model	WLL (tonnes)	Weight (kg)
	DCV500	500	1.2

Designed to lift steel drums vertically (with or without a lid). The clamp automatically grips the rim of the drum when the hook ring is lifted.

Fork Mounted Drum Grips – also available for plastic drums

	Model	WLL (kg)	No. Of Drums	Drum Size (litres)	Fork Spread (mm)	Max. Fork Size (mm)
	FDH-1-110	250	1	110	450	140 x 55
	FDH-1	500	1	210	560	140 x 55
	FDH-1-1000	1000	1	210	550	140 x 55
	FDH-2	1000	2	210	880	140 x 55

Fork Mounted Drum Rotators – also available with sideways rotation

	Model	Capacity (kg)	Operation	Girdle	Drum Size
	DTR-1 DS	360	Handle	Twin Harness	210
	DTR-2 DS	360	Chain	Twin Harness	210
	DTR-1 SC	360	Handle	Single Clamp	210
	DTR-2 SC	360	Chain	Single Clamp	210
	DTR-1 110	360	Handle	Single Harness	110
	DTR-2 110	360	Chain	Single Harness	110

Drum Manipulator - Horizontal/Vertical and Vice Versa

	Model	Capacity kg	Max. Fork Size mm	Fork Spread mm	Drum Size
	DM - 3 tine	400	140 x 50	567	210
	DM - 4 tine	400	140 x 50	567	210

Designed to manipulate Steel and Plastic drums

Safety Harnesses

We provide a comprehensive range of safety harnesses, lanyards and accessories to keep you safe when working at a height and in confined spaces.

Our safety harnesses are manufactured in accordance with EN361. Please note that the capacity of our standard range has been increased from 100 to 150 kg to comply to CNB/P/11.062 and CNB/P/11.060.

This fall arrest PPE is tested to stop the fall of a weight of 150 kg (weight of person with their equipment) with a lower impact 600daN – tested to ALL European standards.

If a fall arrest device only meets EN360, EN353-2 or EN355 without any additional specifications, it can only be used for weights up to 100 kg.

HT31
Rear D

Multi-purpose harness with five adjustment points and a sub pelvic strap

HT22
Front + Rear D

Multi-purpose harness with five adjustment points and a sub pelvic strap

HT54
Side (2) + Rear D

Multi-purpose harness with five adjustment points and a sub pelvic strap

HT56
Side (2) + Front + Rear D

Multi-purpose harness with five adjustment points and a sub pelvic strap

HT22R
Evac + Front + Rear D

Rescue harness with evacuation strap for vertical recovery

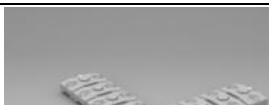

HT Ladytrac
Rear D

Designed for women with five adjustment points, automatic buckles and leg straps

Anchor Points

We offer a variety of alternative anchor points to the webbing sling suitable for man riding applications as follows:

Weight Anchor

	Weights (kg)	
	16 x 22	
<p>The Mobifor weight anchor is a fast and easy to install anchor point made up of 16 x 22 kg weights that are positioned on 4 steel arms connected at the centre by a joining plate equipped with a rotary anchor point and energy dissipater. Designed for terrace roofs with a slope of less than 5 degrees.</p>		

Roll Beam

	Flange Width (mm)	
	58 - 220	
	The Roll Beam enables the creation of a mobile anchor point on an R.S.J. and to work in safety while retaining a wide freedom of movement. Travels on the lower flange.	

Roll Clamp

	Flange Width (mm)
	120 - 380

The Roll Clamp enables the creation of a mobile anchor point on an R.S.J. and to work in safety while retaining a wide freedom of movement. Thanks to its 4 bearing rollers the Roll Clamp follows movements around the framework on the upper or lower flange plate.

Water Anchor

Size (LxWxH)	Weight (kg)
1450 x 1450 x 200	8

The water filled mobile anchor is compatible with a large variety of roof surfaces, can be used on pitched roofs of up to 15 degrees and has been tested to exceed the EN 795 class E standard.

Vacuum Anchor

A blue and black self-contained vacuum anchor system is shown. It features a digital display, several control buttons, and various hoses and connectors. Next to it is a small black compressed air cylinder.

Maximum Capacity (kg)	Power Supply (psi)
141	80 - 150

The self-contained vacuum anchor system is intended to be used as an anchorage point for personnel working on aircraft or other flat smooth structures. Power can be via a compressed air cylinder or a shop air supply.

Accessories

Lanyards - Fall Arrest and Fall Restraint - EN354 EN355

Single Leg Webbing
Length: 1.5m & 2.0m

Single Leg Rope
Length: 1.5m & 2.0m

Twin Leg Webbing
Length: 1.5m & 2.0m

We offer fall arrest and fall restraint lanyards to form a connection between the operator's harness and an anchor point.

Our fall arrest lanyards have a built-shock absorber to reduce the impact forces during a fall.

A single leg lanyard is ideal for general use. A twin lanyard is used when the operator has to move between anchor points whilst still maintaining security.

Retrieval Block
20m, 30m

Temporary Lifeline
(webbing or wire)

Girder Sling
0.6m, 1.0m & 1.5m

Work Positioning – EN358

Ideal for use as protection for a temporary ladder or as a backup for window cleaning and façade maintenance when used in conjunction with a hoist

Rope Grab

Nylon Rope

Ideal for working over the side of buildings or structures whilst maintaining comfort and concentration on the job in hand and their safety

Bosuns Chair

Accessories

Kit Bag

Bolt Bag

Tool Frog

Tool Hook

Mancrouche

Pole Strap

Pole Strap

Tripods

We can supply tripods that can be used for both fall arrest and lifting material loads.

Aluminium Tripod c/w Winch – Adjustable Height

	Working Load Limit (kg)	Height Underside (mm)	Weight (kg)
	500	1340 – 2300	14.3

Weight excludes the manual winch, available with a 20 or 25 metre capacity.

Easylift Tripod System

The Easylift portable tripod frame system is designed to lift a pump out from a sump in a safe manner and for the operatives to simply slide it to one side for safe inspection, repair or replacement.

To ensure the safety of the operative, a fall arrest harness can be attached to the frame, which has also been designed for single man riding.

Key Benefits:

- ✓ Easy and quick to assemble
- ✓ Conforms to the work at height regulation
- ✓ Stable construction
- ✓ Load can be moved without needing to pull the equipment from its centre of gravity
- ✓ Operatives are safe and secure
- ✓ Designed to be erected by one person

Key Design Features:

- Safe working load of 500 kg
- Load trolley
- Man riding trolley
- Spirit level built-in
- Fall arrest points
- Adjustable legs for uneven ground
- Adjustable beam length

Size Adjustment:

Height Range	1475 to 2160 mm
Width Range	2240 to 2560 mm
Depth Range	1000 to 1500 mm

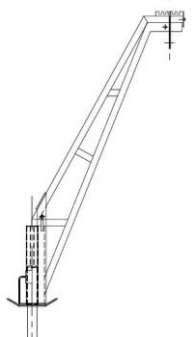

Davits

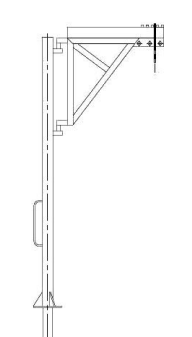

Supplied in a range of capacities and designs. The davit can be permanently fixed in place or portable fitting into a range of sockets for both fall arrest and lifting material loads.

Water industry customers also use our expertise with regard to overhead travelling cranes, monorail gantry systems, jib cranes, stainless and galvanised pump chains, loose lifting tackle and site proof load testing.

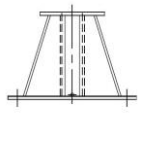

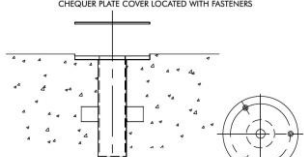

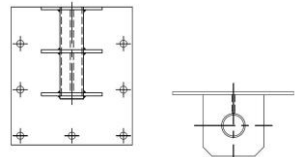

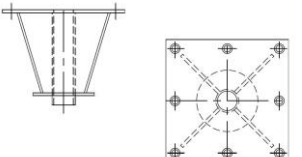

Lean Over Davit

	Capacity (kg)	Reach (mm)
	500	760
	500	1000
	1000	1070
Hot Dip Galvanised		

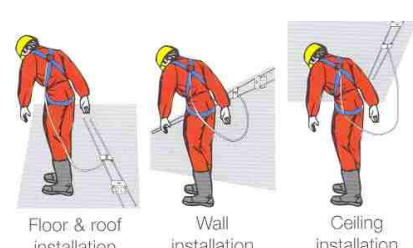

Vertical Pole Davit

	Capacity (kg)	Reach (mm)
	500	760
	500	1000
	1000	1070
Hot Dip Galvanised		

Davit Socket Options

Surface Mounted	Cast-In	Wall Mounted	Inverted
			

Lifeline Systems

 <p>Floor & roof installation</p> <p>Wall installation</p> <p>Ceiling installation</p>	<p>We offer a range of lifeline systems that allow complete freedom of movement for working at height.</p> <p>Our systems can be used horizontally or vertically when working on roofs, overhead steelwork, fixed ladders, towers etc.</p>
---	--

Guard Rails

	<p>The Guard Rail system is formed by 1.10m posts at 1.50m centres on which concrete counterweights are placed to ensure the stability of the assembly. Fitted with 3.0m rails and kickboards.</p> <p>An ideal solution for a roof without penetrating the waterproof membrane.</p>

Load Cells

- ❑ 1000 kg to 300 tonne capacities
- ❑ Rugged & weatherproof to IP 65
- ❑ High Accuracy
- ❑ Push button for tare, units, peak hold, pre-set tare, audible setpoint alarm and overload counter
- ❑ Kg, lbs, kN and tonnes
- ❑ Supplied with carry/storage case

The **LLP load cell** is used for weighing and force measuring throughout industry in factories, loading bays, construction sites and shipyards. With a shackle through each end of the link, the display gives an instant, accurate reading of the force applied and have a push button control for tare, units (kg, lbs, kN & tonnes). All sizes are machined from a single piece of high strength aluminium alloy, giving the ideal combination of lightness and strength. A remote output is fitted as standard to allow connection to our range of accessories.

Model	LLP1T	LLP2T5	LLP6T5	LLP12T	LLP25T	LLP35T	LLP55T	LLP75T

Load Blocks

The Load Block is a self-contained compressive load-measuring device. The load is applied to the pressure pad on the top of the unit, and the reading is clearly shown on the large liquid crystal display (LCD). Load Blocks can be used in presses and test rigs for product or material testing, or in sets of three or four, to weigh very large structures, without the need for a crane or weigh bridge. The Load Block has a strong aluminium casing, with a recess at the front and rear to protect the display and controls from accidental damage.

- ❑ 250 kg to 5000 kg capacities

Mini Weighers

- ☐ Tare
- ☐ Peak hold
- ☐ Pre-set tare

Larger capacities available, please contact us for details

Platform Scales

We offer a comprehensive range of weighing platforms manufactured to meet EU Directives to withstand the demands of continuous use in any industrial environment.

All models can be made to individual specification regarding size, capacity, strength, material, treatment, finish and protection to suit any location from dry conditions to hazardous and hostile areas.

Available manufactured in mild steel or stainless steel.

Low profile 4 load cell weighing platform for freestanding, ramped or dormant applications.

Sizes: From 600 x 600 mm to 4000 x 3000 mm

Capacities: From 300 kg to 15000 kg

A pair or portable heavy-duty weigh beams.

Size: 1200 mm long x 76 mm high

Capacities: From 500 kg to 3000 kg

Four load cell 'U' beam pallet weigher.

Size: 1200 long x 1000 wide x 76 mm high

Capacities: From 500 kg to 3000 kg

Each weighing system will be supplied with an indicator to suit your application and a printer if required.

- Mains or battery powered
- LCD or LED display
- Scanner and printer interfaces
- Counting function
- Clock
- Tare and totals facility
- Wall or bench mount
- RS232 interface
- Intrinsically safe
- IP65

Pallet Truck Weighers

Lifting, transporting and weighing with the same equipment makes it possible to increase efficiency and make large savings.

We offer a weighing system that is factory fitted onto pallet trucks. There are different weighing systems and accessories to cover most weighing applications.

- Capacity: 2000 kg
- Lift Height: 85 - 200 mm
- Fork Length: 1150 / 1220 mm
- Width Over Forks: 570 / 700 mm
- Accuracy: +/- 0.1% of scale capacity
- Display: Can be read from any angle
- Optional: Thermal printer
- The accuracy of the weigher is not affected by the surface on which the truck operates.
- The weighing system consists of four weighing cells, each connected to the display. This ensures accurate weight indication, irrespective of load and position.
- The weigher is equipped with a rechargeable battery. The capacity is a minimum of 10 working hours per charge. The battery can be charged from a 220 volt socket.

Hydraulic Claw Jacks

	Model	Claw Capacity (kgs)	Head Capacity (kgs)	Closed Height (mm)	Stroke (mm)	Weight (kgs)
	BVA-3	3000	3000	16 / 230	130	17.8
	BVA-6	6000	6000	22 / 267	130	27.2
	BVA-10	10000	10000	28 / 280	130	39.5
	BVA-15	15000	15000	28 / 332	130	54.3

Features include a low toe height and a large base area.

AJH/S Aluminium Hydraulic Jacks

	Aluminium jacks combine light weight with a high lifting capacity. The use of high tensile aluminium alloys allows lifting capacities of up to 100 tonnes resulting in a very favourable 1.8 tonnes lifting capacity per 1 kg weight ratio.					
	Capacity: 6.5 to 100 tonne without toe Capacity: 20 to 60 tonne with toe					

Model	Capacity Head (tonnes)	Capacity Toe (tonnes)	Stroke (mm)	Closed Height (mm)	Base Plate Size (mm)	Weight (kgs)
AJS-653	6.5	-	75	131	159 x 76	3.6
AJS-104	10	-	115	182	171 x 76	6.3
AJH-620-toe	20	8	152	280	250 x 120	67

AJH-660-toe	60	24	152	327	340 x 190	72
AJH-1260-toe	60	24	305	533	340 x 190	72

Jacks

Hydraulic Machine Jacks

	Model	Capacity (kgs)	Stroke (mm)	Closed Toe Height (mm)	Closed Head Height (mm)	Weight (kgs)
	HMJ-50	5000	205	25	368	25
	HMJ-100	10000	230	25	420	35
	HMJ-250	25000	215	58	505	109

Can be used vertically and horizontally. Removable pump handle.

Manual Steel Jacks with Fixed Claw

Primarily used for assembly applications, to brace or support loads but can be used for almost any application. The load can be positioned on the head or the toe. Turn the operating handle to smoothly lift or lower the load up and down the rack. The load is held securely in any position.

	Model	Capacity Head (mm)	Capacity Toe (mm)	Stroke (mm)	Closed Toe Height (mm)	Closed Head Height (mm)	Weight (kgs)
	SJ1.5	1500	1050	360	70	725	13.0

RSJ Model
High stability on uneven ground is ensured by the extra-large floor plate (e.g. gravel).

Roller Pinch Bars

Available with steel rollers, ideal for lifting, shifting and positioning of awkward loads.

	Type	RPB1500	RPB5000
	Capacity	1.5 tonnes	5 tonnes
	Lift Height	145 mm	145 mm
	O/A Length	2000 mm	2000 mm
	Roller Diameter	75 x 55 mm	70 x 54 mm
	Weight	16.5 kg	32 kg

Pumps and Cylinders

We offer a comprehensive range of hydraulic equipment and tools designed for professional operation.

Our cylinders are designed from high quality chromium-molybdenum steel and heat-treated.

They are provided with double bronze bearings on the plunger, which minimises friction between the plunger and the body during lateral loading.

To facilitate the installation of hydraulic cylinders in jigs and fixtures a metric mounting thread is supplied.

Universal Cylinders
(single and double acting)

Low Height Cylinders
(single acting with spring return)

Pull Cylinders
(single acting with spring return)

Hollow Cylinders
(single and double acting)

High Tonnage Cylinders
(double acting)

Cylinders with Safety Lock Nut
(single acting)

Hand pumps are the most common power source within the area of 'High Pressure Hydraulic Tools'. For this reason our hand pumps have been designed and equipped with many details which make the pumps very versatile and handy in every day applications including:

- Relief valve / hand wheel
- All metal design
- Carrying handle
- Pressure relief valves
- Reservoir ventilation
- Two-stage output
- Easy maintenance design
- Return oil port
- Base frame
- Pressure gauges

Pallet and Stacker Trucks

Manual Pallet Truck

Capacity: 2000 - 2500 kg
Fork Length: 600 - 3000 mm
Width Over Forks: 450, 540 and 685 mm

Electric Pallet Truck

Capacity: 1500 kg
Fork Length: 1000 and 1150 mm
Width Over Forks: 560 and 680 mm

Manual Highlift Pallet Truck

Capacity: 1000 kg
Lift Height: 800 mm
Fork Length: 1170 mm
Width Over Forks: 540 and 680 mm

Electric Highlift Pallet Truck

Capacity: 1000 kg
Lift Height: 800 mm
Fork Length: 1170 mm
Width Over Forks: 540 and 680 mm

Galvanised Steel Pallet Truck

Capacity: 2000 kg
Fork Length: 1150 mm
Width Over Forks: 540mm

Stainless Steel Pallet Truck

Capacity: 1000 kg
Fork Length: 1150 mm
Width Over Forks: 540 mm

Stacker Trucks

Manual Truck

Capacity: 500 and 1000 kg
Lift Height: up to 2050 mm
Fork Length: 1140 mm
Width Over Forks: 528 mm

Manual Stacker Truck

Capacity: 1000 kg
Lift Height: up to 3000 mm
Fork Length: 915 mm
Width Over Forks: 210 – 800 mm adjustable

Semi-Electric Stacker Truck

Capacity: 1000 - 2000 kg
Lift Height: up to 3300 mm
Fork Length: 1150 mm
Width Over Forks: 540 mm

Electric Stacker Truck

Capacity: 1000 - 2000 kg
Lift Height: up to 3300 mm
Fork Length: 1150 mm
Width Over Forks: 540 mm

Metal Roller Skates

This range of caterpillar roller skates are a cost effective, safe and easy method of moving heavy and bulky loads in any direction. They operate by the action of an endless roller chain revolving around the centre member of the body. The load is borne by the rollers and the body providing an extremely low coefficient of friction of usually between 3% and 7% of the total load.

Supplied in a set of 4 and can be used on their own or together with steering accessories supplied.

Turntables can be located on the top of the skate when it is desired to have complete control over the steering of the load, for example when manoeuvring in confined spaces.

Stabilisers are used in conjunction with the turntables to compensate for the height difference on skates with turntables and those without.

Spacer Bars are used to tie two skates together to keep them parallel under movement.

Rubber Pads for the load to rest on to facilitate even weight distribution and compensate for slight floor unevenness. It also eliminates metal to metal contact.

Steering Handles are supplied and are for steering purposes only, when the skates are fitted with turntables. They are not for pulling or pushing the load.

Systems are supplied in their own high quality, lockable, steel boxes with nylon castors. These robust carrying cases help keep all the set together and prevent loss of individual components.

Model	System Capacity (tonnes)	Skate Length (mm)	Skate Width (mm)	Skate Height (mm)	Turntable Height (mm)	Roller Width (mm)	Roller Diameter (mm)	System Weight (kg)
SC 20	20	205	102	62	41	51	18	50
SC 50	30	215	112	74	41	58	24	58
SC 60	60	268	130	92	48	66	30	92

Other special heavy-duty skates are available on request.

Nylon Roller Skates

Features & Benefits:

1. Special Composite Wheel Equipment

This unique material is machined from solid to produce the ideal wheel for use on modern industrial flooring. Hard enough to give incredibly low rolling resistance yet designed to protect expensive coated surfaces, unlike conventional metal wheeled skates.

2. Made from S.G. Iron rather than of Welded Construction

This malleable material is immensely strong, is reproduced with total accuracy and is powder coated prior to assembly. Conventional steel fabricated units have to be much larger to achieve the same capacities and are therefore more cumbersome to use and transport.

3. Steerman's Three Point Loading System

This ensures a safe and stable configuration, which eliminates the risk of one skate rolling out from below the load. This design also ensures that loads are not carried on a reduced number of wheels when travelling.

4. Unique Turntable design

A special cast nylon material has been developed for strength and light-weight. Large diameter thrust bearings allow these turntables to swivel effortlessly while the special composite material ensures both anti-slip properties and greater impact resistance.

Specifications:

Model	Capacity	Total No. of Wheels	Overall Height	Rear Adjustment	Net Weight
SX10 *	10 tonnes	16 @ 82 mm Ø	102 mm	252 - 1200 mm	54 kg
SX20 *	20 tonnes	32 @ 82 mm Ø	102 mm	480 - 1500 mm	76 kg
SX30 *	30 tonnes	48 @ 82 mm Ø	110 mm	720 - 1500 mm	136 kg
S60	60 tonnes	48 @ 115 mm Ø	170 mm	800 - 2000 mm	302 kg

* Also available in ATEX Explosion Proof specification

Air Skates

Air skates literally float heavy loads on a virtually frictionless film of air. Reduced friction and omni directional movement allow the operator to precisely place and align the load in a limited workspace. The low profile of the load module requires less than 70 mm clearance and will not damage the floors and expensive reinforcement is usually not necessary. Because we only use basic pneumatic components such as air regulators and hoses, our products are not only reliable but will operate in most environments.

Typical System:

Position	Description	Qty
1	Air skate module	4
2	Distribution hose – 3/8"	2
3	Distribution hose – 3/8"	2
4	Regulator unit	1
5	Supply hose – 1/2"	1
6	Connection nipple G1/2"	1

Easy Movers

Used in pairs for effortless lifting and moving of awkward loads. Simply place 1 unit at each end of the load, raise the load off the floor, secure the unit connecting straps and move away. The SC/600 is supplied with a manually operated winch to lift the load whilst the SC/1800 is supplied with a manually operated hydraulic ram to lift the load.

SC/600

SC/1800

SC/1800

Model	Capacity (kg)	Operation	Lifting Height (mm)	Lifting Plate (mm)	Wheels (mm)	Weight (kg)
SC/600	600	Manual	300	225 x 120	125 Ø	25 / pair
SC/1800A	1800	Hydraulic	100	600 x 60	150 Ø	80 / pair
SC/1800B	1800	Hydraulic	250	600 x 60	150 Ø	86 / pair

Gravity Roller Systems

A simple and economic method of material movement supplied with a variety of roller heights, diameters and pitches to suit your application.

Features Include:

- Adjustable height stands
- Turntables
- Ball rollers
- Hinged gates
- Curves
- Junctions
- Mobile sections
- Integrated scissor lifts
- Roller protective coatings

Powered Roller Systems

We can also offer powered roller conveyor systems manufactured to your specification.

Reel Lifting and Turning Systems

Lemm equipment is built for individual applications in the paper, label, film and foil producing industries. It is designed to grip and rotate through 90 degrees sensitive, costly material in reels with no loss of value through faulty handling. Moving materials in reels is a job where slip-ups can be expensive. Damage to edges and outer layers increase costs. Incorrect handling often causes accidents involving personal injury - that's why Lemm designs incorporate safety as a top priority. Lemm equipment is normally suspended from an electric chain hoist on a jib or overhead crane but is now available mounted onto a mobile battery lift truck.

RH & RHA

These units are for picking up reels with the core vertical. There is no rotation facility on these models. The RH model has a manually operated core gripper whilst the RHA model has an automatic operation of the core gripper. Optional reel turner clamps are available for telescoping materials.

The maximum safe working load is 2000 kg.

RWM

This unit has a manually operated expanding core gripper to grip the reel and a manually operated pivot to rotate the load through 90 degrees.

The maximum safe working load is 150 kg.

RWK I/A

This unit is used for lifting reels with materials, which will telescope if lifted by the core alone. It pneumatically grips the reel between a mandrel in the core and a gripper on the outside diameter of the reel and also uses the pneumatics to rotate the reel through 90 degrees. The mandrel in the core can also be used to grip the core if required.

The maximum safe working load is 300 kg.

RWS

This unit has a manually operated expanding core gripper to grip the reel and a hydraulically operated pivot to rotate the load through 90 degrees.

The maximum safe working load is 2000 kg.

Mobile Reel Turners

These units offers mobile reel lifting and turning systems to rotate the reel through 90 degrees using either:

- i) A spindle in the core of the reel (as shown)
- ii) A clamp on the outside diameter of the reel

The reel turner is incorporated into a mobile stacker truck offering a variety of lift heights with manual or powered travel.

The maximum safe working load is 1000 kg.

Festoon and Conductor Systems

Festoon Cable Systems

These components enable the user to build complete festoon cable supply systems for trolleys, cranes and monorails and for automatic charging and processing machines. It can also be used for easy movement of electric and pneumatic portable tools suspended by means of balancing devices (also supplied by us).

- Light-weight robust components
- High rigidity of the hollow section rail
- Low dead weight
- High resistance to wear
- Electro-galvanised for good resistance to corrosion
- Plastic or steel travel wheels mounted on anti-friction bearings

Conductor Systems

Suitable for heavy-duty electrical supply on cranes and monorails.

- Easy installation with pre-assembled connectors
- Expansion accommodated at every joint
- The system can be inspected at every joint
- Fast, simple replacement of straight sections
- Compact dimensions
- High rigidity
- Low dead weight
- Protected power cables integrated in the current collector trolley
- Pre-assembled sliding contacts connected and fixed with just one screw

Energy Chain Systems

- Ideal for use with various types of motion and travels
- Guidance of sensitive bus and data cables, as well as LWL, using the same techniques as with electric, gas, air and liquid hose guidance
- Long service life under very high loads and demanding requirements
- Smooth operation in a full range of environments and climates
- Supplied with cable and guide troughs

Ladders and Steps

Step Ladders

	Treads	Platform Height (mm)	Overall Size-In Use (HxWxD) (mm)	Folded Height (mm)	Weight (kg)
	3	616	1244 x 470 x 723	1426	3.8
	4	828	1461 x 496 x 869	1656	4.4
	5	1041	1677 x 525 x 1016	1887	5.0
	6	1253	1893 x 552 x 1163	2117	6.1
	7	1465	2110 x 580 x 1309	2348	7.2
	8	1677	2326 x 607 x 1456	2529	8.4

Step Ladders with Hand Rails

	Treads	Platform Height (mm)	Overall Size-In Use (HxWxD) (mm)	Folded Height (mm)	Weight (kg)
	3	616	1244 x 470 x 723	1426	3.8
	4	828	1461 x 496 x 869	1656	4.4
	5	1041	1677 x 525 x 1016	1887	5.0
	6	1253	1893 x 552 x 1163	2117	6.1
	7	1465	2110 x 580 x 1309	2348	7.2
	8	1677	2326 x 607 x 1456	2529	8.4

Combination Ladders

	Treads	Closed Height (mm)	Extended Length (mm)	Max. Δ Working Height (mm)	Weight (kg)
	3 x 7	2000	3700	3200	14.0
	3 x 9	2500	5300	4200	18.5
	3 x 11	3000	6700	5200	22.0
	3 x 13	3500	8300	6200	27.5

Mobile Steps

	Treads	Handrail	Platform Height (mm)	Overall Size (H x W x D) (mm)	Weight (kg)
	2	No	500	580 x 560 x 575	8.0
	2	1	500	960 x 560 x 575	9.0
	2	2	500	960 x 560 x 575	10.0
	3	2	750	1460 x 560 x 725	13.0
	4	2	1000	1710 x 560 x 875	16.0
	5	2	1250	1960 x 610 x 1025	21.0

Manhole Lifting Devices

Manhole Lifting Pins – Pivoting Latch

Manhole lifting pins are usually used in pairs with a 2-leg chain sling and offer a fast and safe way of lifting concrete manhole rings. The latch pivots to allow it to be inserted through the hole in the manhole ring. When it is released it automatically rotates to lock the pin in place due to its off centre pivot point.

	Capacity / Pin (kg)	Pin Diameter (mm)
	750	25
	1000	32
	1500	35
	2000	38

Manhole Lifting Pins – Washer and Pin

	Capacity (kg)	Pin Diameter (mm)	Max. Wall Thickness (mm)
	1500	30	150

Road Gully Grab – type SAG

A grab for base, cylindrical and conical drain assemblies.

			Capacity (kg)	Clamping Range (mm)	Weight (kg)
			150	460 / 560	12

Internal Manhole Housing Grab – type RG

Designed to lift manhole housing and covers with vents.

		Capacity (kg)	Housing Diameter (mm)	Weight (kg)
		200	610 / 625	12

Manhole Housing Grab – type RG

Designed to lift manhole housing and covers.

			Capacity (kg)	Housing Diameter (mm)	Weight (kg)
			200	750 / 785	15

Complete with a set of hooks type A and B

Manhole Lifting Devices

Manhole Clamp – type SZ

Ideal for the transport and laying of manholes. Clamp adjusts automatically to wall thickness.

	Capacity (kg)	Clamps	Jaw Surface	Clamping Range (mm)	Manhole I/D (mm)	Web Length (mm)	Weight (kg)
	1000	2	Steel	40 - 120	800 - 2000	1450	16
	2000	2	Steel	60 - 180	800 - 2000	1450	28

	Capacity (kg)	Clamps	Jaw Surface	Clamping Range (mm)	Manhole I/D (mm)	Web Length (mm)	Weight (kg)
	1500	3	Steel	40 - 120	800 - 2000	1450	28
	1500	3	Steel	40 - 120	800 - 2800	2050	27
	3000	3	Steel	60 - 180	800 - 2000	1450	40
	3000	3	Steel	60 - 180	800 - 2800	2050	41
	4000	4	Steel	60 - 180	800 - 2500	1450	55

	Capacity (kg)	Clamps	Jaw Surface	Clamping Range (mm)	Manhole I/D (mm)	Chain Length (mm)	Weight (kg)
	1500	3	Steel	40 - 120	800 - 2000	1450	33
	3000	3	Steel	60 - 180	800 - 2000	1450	45
	3000	3	Steel	60 - 180	800 - 3000	2200	47

Manhole Grabs – type RSV

A rubber coated jaws are needed for smooth, painted or coated manholes.

	Capacity (kg)	Clamps	Jaw Surface	Clamping Range (mm)	Manhole I/D (mm)	Chain Length (mm)	Weight (kg)
	1500	3	Steel	40 - 120	400 - 2000	1500	31
	1500	3	Steel	40 - 120	400 - 3000	2000	33
	1500	3	Rubber Coat	0 - 70	400 - 2000	1500	34
	3000	3	Steel	50 - 180	400 - 2000	1600	53
	3000	3	Steel	50 - 180	400 - 3000	2200	57
	3000	3	Rubber Coat	0 - 130	400 - 2000	1600	55
	3000	3	Steel	90 - 230	400 - 2000	1600	54
	3000	3	Steel	90 - 230	400 - 3000	2200	58
	3000	3	Rubber Coat	50 - 180	400 - 2000	1600	56
	1000	2	Steel	40 - 120	-	800	10
	2000	2	Steel	50 - 180	-	800	17
	4000	4	Steel	50 - 180	1000 - 2500	1600	82

Manhole Cover Lifter – type KH

Designed to lift manhole covers using a hydraulic cylinder. Easy to dismantle and transport in a car boot.

			Capacity (kg)	Lifting Height (mm)	Hook Distance	Total Width (mm)	Weight (kg)
			1000	250	260 - 980	1200	30

Complete with a set of hooks type A and B

Carrymate Panel and Door Lifters

Ideal for lifting and moving a variety of materials:

- Steel
- Glass
- Plywood
- Stone
- Plasterboard
- PVC
- Doors

The Carrymate is a manually operated self-adjusting clamp system designed to be used in pairs to lift a variety of panels. They are fitted with replaceable non-slip grips that also prevent damage to the carried load.

Each clamp can lift up to 100 kg

Single Handle Grips

Sizes:

- 1) 0 – 80 mm
- 2) 40 – 120 mm
- 3) 80 – 160 mm

Sold in pairs

Double Handle Grips

Sizes:

- 1) 0 – 80 mm
- 2) 40 – 120 mm
- 3) 80 – 160 mm

Sold in pairs

Portman Door Lifter

Lifts, lowers and swivels to enable smooth foot control when fitting a door. Available in two sizes:

XL – 120 kg
XXL – 200 kg
